

Power brake System assembly

ZC-DL02A

- Double Circuit Brakes on panel operated manually
- Wall panel representing a double circuit braking system.
- As in real conditions, it operated by a hydraulic pump connected to the disc brake and a drum brake.
- A braking adjuster placed between the pump and the (rear) drum brake in the circuit in order to avoid the rear wheels locking during the braking phase.
- The same devices used in the circuit have been sectioned and added in the panel to clearly show their operation.

Technical Parameter

1. Power supply: AC 220V/50Hz
2. Suitable car models listed below:
3. Product composition
4. Air brake system
5. Pressure gauge
6. Brake Booster device
7. Gas tank
8. Motor
9. Air pump
10. Mobile stand
