

Vacuum Dent Removal Machine Model: ZC-QC081D

Features:

- a. High quality aluminum alloy die-casting manufacturing for prolonged use.
- b. The use of high density and high abrasion rubber chassis grab stronger environmental material.
- c. Glass sucker is mainly used to get sucked glass tile floors, smooth surface electrostatic items of hand tools.
- d. The use of rubber chassis toughness and deformation creates a vacuum, and with the atmospheric pressure will suck firmly goods, so as to achieve the purpose of the goods lift and handling.

Specification:

Material	Aluminum Alloy
Size	11.5x11.5x9.2cm
Net weight	412g
Sucker diameter	125mm
Horizontal suction	50kg
Vertical suction	35kg
